Summary

Backend engineer with 3.5 years at Simpplr, a B2B SaaS employee experience platform, building TypeScript services (NestJS, Fastify, PostgreSQL, Kafka) for its recognition and rewards product. Own the rewards ledger that is the source of truth for balances and transaction history. Uses Claude and Cursor to design, build, test and ship features faster without trading off code quality. Rated Far Exceeds Expectations for FY2026.

Experience

Associate Software Engineer May 2023 – Present
Simpplr *Remote*

- Designed and built the rewards ledger recording every rewards transaction, serving as the source of truth for balances and history; used it to allocate 111,000+ points mid-cycle across multiple customers through a safe, auditable process.
- Owned the Tango gift-card availability webhook end to end, from API and data model design to production, preventing redemptions from failing on out-of-stock items.
- Built core logic for the Programs feature with Peer Awards (award, per-giver and total program limits with weekly, monthly and quarterly resets) and delivered a key milestone in 15 days, half the expected time.
- Shipped bulk points upload via CSV and concurrency-safe editing of recognition points; upgraded a service from Node.js 18 to 20 and fixed critical SonarQube issues, including SQL injection.
- Merged 150+ PRs across Recognition, Rewards and Redemption services with 80%+ code coverage, and mentored two new backend engineers through onboarding.
- Used AI coding tools (Claude, Cursor) daily for the last 1.5 years to deliver end-to-end features faster, shipping production-ready code with zero reported production bugs.
- Deployed services on Docker and Kubernetes with CI/CD on GitHub Actions and Jenkins.

Full Stack Developer Oct 2022 – Feb 2023
eMoment.in *Remote*

- Built Node.js APIs and React features for a platform enabling stock purchases with Solana.
- Shipped features and resolved production bugs across backend and frontend, picking up Node.js and SQL without senior guidance.

Teaching Assistant, Java DSA May 2022 – Sep 2022
Coding Ninjas *Remote*

- Mentored 969 students and resolved 1,520 doubts with a 4.77/5 rating.

Education

Jain (Deemed-to-be University) Bangalore, India
Master of Computer Applications, Artificial Intelligence *2025 – Present*

Bangalore North University Kolar, India
Bachelor of Computer Applications · CGPA 7.4/10 *2022*

Technical Skills

Languages: TypeScript, JavaScript, Java, SQL
Backend: Node.js, NestJS, Fastify, Express, REST APIs, Microservices, Kafka
Data: PostgreSQL, Prisma, Redis, MongoDB
Infra and tools: Docker, Kubernetes, GitHub Actions, Jenkins, Git, Linux
AI-Assisted Development: Claude, Cursor to design, build, test and ship features faster without trading off quality
Frontend: React, Redux, Next.js

Certifications

Full Stack Web Development in Node.js (Back End) | *Coding Ninjas · Top Performer* 2022
Data Structures in Java | *Coding Ninjas · Top Performer* 2022
Understanding TypeScript | *Udemy* Jan 2024
The Complete JavaScript Course: From Zero to Expert | *Udemy* Dec 2023
Cutshort Certified JavaScript — Advanced | *Cutshort* 2023
